PROJECTS

- Explorative Data Analytics Project: Gathered datasets via web scraping and Kaggle, manipulated and cleaned the combined dataset ready for visualisation and analysis to find the “perfect” dog ([Repository](#))
- Summer Studio 2020 – IoT Product Development*: Built and 3D-printed an IoT product measuring room temperature sending data insights to Grafana and coded patterns into the device ([Personal blog](#))
- Global Trade Accelerator Program 2020*: Researched and built a business plan for finding Sales Lead in Singapore for BWD Strategic. Results exceeded client's expectations
- Data Analytics course*: participated in a Kaggle competition and built a classifier in Knime to predict ‘adult income’ ([Competition](#))
- Cloud Computing course*: Developed an application in AWS for a small start-up and created a prototype application in Force.com for a car dealership. Achieved High Distinction for the course
- Finalist at Case Competition SDU 2019*: built a prototype for a money saving app for a Danish Bank
